Screen Design Changes

All the screens can be navigated to, however, due to lack of time and the function are beyond the covered topic, some of the screens are not implemented as the original designs, and some of the screens are removed.

All the screens are functional, but they are either implemented with the similar style as the original designs, or same style but removed some elements, or only with the basic ionic style.

Follow bullete point contains a list of screen design changes. Other screens that are not listed are the screen both functioning and implement the original design.

Functioning but with different design style or different element:

Regist page

- Add checklist and number input

Novel category page:

- Removed the writer icon from the icon-card element

View novel page:

- Removed the icons on the header
- Removed all the buttons except back button

Edit profile page

- Removed textarea input filed
- Add other input fields

View draft page

- Removed bottom button

Functioning but with basic ionic style:

User profile page:

- no longer have following/follower information display
- no longer have my novels page display

Removed screens:

Search page

Novel detail page

Comment page

Following and follower page

Comment page

My-novel page

Feedback page

Implementation Documentation

Issues: Map display, status bar colour

Google map is well displayed on a browser or IonicDevApp, but it is not displayed when running on a device.

Status bar colour not displayed correctly on the app. It changes colour but cannot change back to the default when returning from the previous page.
